**Auditor's Report on Review of
Interim Financial Statements
To the Board of Directors of EGYPT GAS (S.A.E)**

Introduction

We have carried out a limited review of the interim financial statements of EGYPT GAS (S.A.E), represented in the accompanying financial position as of 30 June 2026, and the related statements of profit or losses, comprehensive income, changes in shareholders' equity, and cash flows for the period then ended and a summary of the significant accounting policies and other explanatory notes.

Management is responsible for the preparation and fair presentation of these interim financial statements in accordance with Egyptian Accounting Standard No. (30) "Interim Financial Statements" and other relevant Egyptian Accounting Standards, and for such internal control as management determines is necessary to enable the preparation of interim financial statements that are free from material misstatement, whether due to fraud or error. Our responsibility is limited to expressing a conclusion on these interim financial statements based on our review.

Scope of Limited Review

We conducted our review in accordance with Egyptian Standard on Review Engagements No. (2410) "Review of Interim Financial Statements Performed by the Independent Auditor of the Entity". A review of interim financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Egyptian Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these interim financial statements.

Basis for Qualified Conclusion

We did not receive confirmation replies for certain balances of receivables and related parties (debit balances) as at December 31, 2025. In the absence of such confirmations, we were unable to determine the effect, if any, on the financial statements, net debit balances, results of operations and equity for the six-month period ended 30 June 2026. This matter was also the basis for the qualified opinion expressed by the predecessor auditor on the financial statements for the year ended 31 December 2025. Accordingly, the effect of this matter also extends to the comparative figures.

Qualified Conclusion

Based on our review, except for the possible effects of the matters described in the "Basis for Qualified Conclusion" paragraph, nothing has come to our attention that causes us to believe that the accompanying interim financial statements do not present fairly and clearly, in all material respects, the interim financial position of the Company as at 30 June 2026, and its interim financial performance and interim cash flows for the six-month period then ended, in accordance with Egyptian Accounting Standard No. (30) "Interim Financial Statements" and other Egyptian Accounting Standards.

Emphasis of Matter Paragraph

Without qualifying our opinion, we draw attention to the fact that the Company's management recognizes its share in the profits and losses of its investments in associates based on approved financial statements. Accordingly, the recognition of its share in such investments may be delayed until the financial statements of the associate companies are approved and issued.

Other Matter

The annual financial statements of the Company for the financial year ended 31 December 2025 which constitute the comparative figures for the accompanying interim statement of financial position were audited by another auditor, who issued a report dated 8 March 2026 containing a qualified opinion on the grounds of not receiving confirmation replies for certain balances of receivables and related parties (debit balances) as at December 31, 2025

We performed the review procedures we considered appropriate in the circumstances with respect to the principal opening balances as at 1 January 2026. It came to our attention that the matter giving rise to the qualification referred to above remains outstanding and has not been resolved as at 30 June 2026, which has resulted in the qualified conclusion expressed in this report as set out in the "Basis for Qualified Conclusion" paragraph.

1/2 the purpose of the company

Carrying out natural gas projects, establishing, operating, managing and owning gas pipelines, facilities, utilities, systems and all equipment in accordance with the provisions of the law.

Several amendments have been made to the company's articles of association, whether with regard to the purpose, names or capital, and the name of the company has become (Egypt Gas Company) an Egyptian joint stock company instead of the Natural Gas Projects Company (an Egyptian joint stock company) The company has 52 customer service centers within the Arab Republic of Egypt. and four external branches in The Hashemite Kingdom of Jordan – The Sultane Of Oman – The Kingdom of Saudi Arabia – The Emirate Of Abu Dhabi in The United Arab Emirate.

1/3 Duration of the company

The duration of the company is 25 years starting from September 4, 2008 which represents the second renewal period.

1/4 Registration in the Commercial Register

The company was registered in the Commercial Register under No. (117267) on February 18, 2018.

1/5 The Egyptian Stock Exchange

The Securities Listing Committee of the Cairo and Alexandria Stock Exchanges approved the listing of the company's shares on April 7, 1992.

1/6 Board of directors' approval of the financial statements

The company's periodic financial statements for the financial ending on June 30, 2026, were approved by the company's board of directors on 13 , August 2026

2 The most important accounting policies used

The following is a summary of the most important accounting policies used which consistently applied during the period under review.

2.1 Basis of financial statements preparation:

The financial statements are prepared according to the historical cost principle and according to the Egyptian accounting standards and in the light of the Egyptian laws and regulations.

2.2 Foreign Currency Translation:

The financial statements are prepared and presented in Egyptian pounds, which is the company's dealing currency. Transactions in foreign currencies are recorded using the exchange rate effective on the date of the transaction, and on the date of each balance sheet:

(a) Monetary items denominated in a foreign currency are translated using the closing rate and the currency differences are included in the income statement.

(b) Items of a non-monetary nature that are measured in terms of historical cost in a foreign currency shall be translated using the exchange rate at the date of the transaction.

(c) Non-monetary items carried at fair value in a foreign currency are translated using the exchange rates prevailing at the time the fair values were determined.

2.3 Estimates and Assumptions:

The preparation of financial statements in accordance with Egyptian Accounting Standards requires management to use personal judgment, estimates and assumptions that affect the application of policies and presented values of assets, liabilities, revenues and expenses. subjective judgment about the carrying amounts of assets and liabilities more clearly than from other sources, and actual results may differ from those estimates.

The estimates and related assumptions are reviewed periodically.

A change in accounting estimates is recognized in the period in which the estimate is changed if the change affects only this period, or in the period of the change and future periods if the change affects both.

2.4 Fixed Assets & Depreciation:

Fixed assets are recorded at historical cost, and depreciable fixed assets are depreciated using the straight-method as follows:

<u>Assets</u>	<u>Depreciation rate inside Egypt</u>	<u>Depreciation rate outside Egypt</u>
Buildings and rest houses	5%-10%	15%
Office equipment	10%	15%
transportation and transfer	10%	15%
Vehicles	20%	25%
Office furniture and equipment	10%-25%	15%-35%

When calculating the residual value of assets that have not been completely depreciated, the residual value should be depreciated in a regular manner over the remaining useful life of the asset.

2/4/1 First recognition and measurement

Cost includes the direct costs attributable to acquiring the asset, and for assets that are constructed internally, the cost of the asset includes the cost of materials and other direct labor required to bring it to a working condition in the location and for the purpose for which it was acquired, as well as the costs of removing it and restoring the site on which it is located of these assets.

Expenses are charged with the value of tools and equipment which value is less than 3000 Egyptian pounds, according to the approval of the Board of Directors.

The components of an item of fixed assets that have different useful lives are accounted for as independent items within those fixed assets.

2/4/2 Subsequent costs of acquisition

The book value of fixed assets includes the cost of replacing part or component of those assets when it is expected to obtain future economic benefits as a result of spending that cost, and the cost can be measured with a high degree of accuracy, Other costs are recognized in the income statement as expenses when incurred

2.5 Decrease in the value of assets

The book value of the owned assets is reviewed on the date of preparing the financial statements to determine whether there are any indications of a decline in their value, and in the event that such indicators exist, the necessary studies are prepared to determine the expected recovery value of these assets.

The assets are recognized at the expected recoverable value, and the difference between the book value and the recoverable value is charged to the income statement The recoverable value of the asset or the cash-generating unit is its use value or its fair value less selling costs, whichever is greater. The expected future cash flows are discounted to reach the present value using a discount rate that reflects the current market assessment of the time value of money and the risks associated with the asset.

2.6 Intangible assets:

Intangible assets acquired individually are initially recognized at cost.

After initial recognition, intangible assets are recorded at cost less accumulated depreciation and accumulated impairment losses.

The intangible assets generated internally are not capitalized as an asset, and the expenses are recognized in the statement of profits or losses in the year in which the expenses were spent.

The useful life of intangible assets is defined as finite life or indefinite life.

Intangible assets with specified useful lives are depreciated over the economic life of the asset, and a measurement for impairment test is made when there is an indication of the impairment of the asset. The amortization period and the amortization method for an intangible asset with a definite life are reviewed at least at the end of each fiscal year Intangible assets are the licenses of the SABB program, and they are depreciated using the straight-line method according to their useful life Intangible assets are depreciated using a straight-line method with a depreciation rate of 15% - 35% in coordination with the technical member.

2.7 Projects under construction:

Projects in progress are recorded at cost according to the first measurement. The cost includes all directly related expenses necessary to prepare the asset to the state in which it is operated and for the purpose for which it was acquired. Projects under construction are transferred to the item of fixed assets when the asset is available for operation in the purpose for which it was acquired. Projects under construction are evaluated in financial statement date at cost, less impairment losses, if any.

2.8 Investments:

2.8.1 Financial investments at fair value through comprehensive income

Financial investments at fair value through other comprehensive income are represented by the company's shares in the capital of other companies at a rate that does not allow it to influence them, and according to the company's business model, they are evaluated at fair value through other comprehensive income. These investments are recorded at acquisition cost and subsequently measured at fair value through the other comprehensive income statement. When there is impairment in the value of equity instruments valued at fair value through other comprehensive income, this impairment is not recognized in profits and losses and is recognized within equity. When an instrument is excluded from equity

instruments, its accumulated amount in other comprehensive income is transferred to retained earnings.

2.8.2 Investments in associate company

Investments in associate companies are investments in companies in which the company has significant influence, but neither subsidiary nor and interest in a joint venture significant influence is presumed when the company owns, directly or indirectly through its subsidiaries, 20% or more of the voting rights. In the investee company, except in cases where it is clear that such ownership does not represent significant influence.

The investment in the associate companies is calculated using the equity method, where the investment in the associate company is recognized upon acquisition at cost, and the investment is increased or decreased to recognize the company's share of the profits or losses of the associate company after the date of acquisition, and the company's share in the profits or losses of the associate companies is recorded in the income statement. The investment balance is reduced by the value of the dividends obtained from the associate company, and the company's share in the other comprehensive income items of the associate companies is recorded within the company's other comprehensive income items, for each investment separately.

2.9 Inventory:

Inventory is valued based on cost or net realizable value, whichever is less, in accordance with Egyptian Accounting Standard No. (2), and the cost has been calculated on a weighted average basis.

2.10 Provision:

Provisions for liabilities are recognized when the company has a legal or constructive obligation as a result of past event and it is probable that an outflow of economic benefit will be required to settle the obligation and the liability can be reliably estimated. Where the effect of the time value of money is material, the amount of a provision should be estimated by discounting future cash flows using a discount rate before tax which reflects the current estimate of the time value of the money and the risk related to the obligation. Provisions are reviewed at the financial position date and adjusted to reflect the current best estimate.

2.11 Financial Instruments

Financial Assets:

Recognition and Initial Measurement:

On initial recognition, financial assets are classified according to the business model in which those financial assets are managed and their contractual cash flows, according to one of the following categories:

- (1) Debt instruments at amortized cost.
- (2) Debt instruments at fair value through other comprehensive income, "with profits or losses being reclassified to the statement of profit or loss upon disposal."
- (3) Equity instruments at fair value through other comprehensive income, "without reclassifying profits or losses to the statement of profit or loss upon disposal."
- (4) Financial assets at fair value through profit or loss, including equity instruments and derivatives.

Debt Instruments at Amortized Cost:

A financial asset is measured at amortized cost if it meets the following two conditions, and is not measured at fair value through profit or loss:

The asset is held within a business model whose objective is to hold assets to collect contractual cash flows, and

The contractual terms of the financial assets give rise to cash flows on specified dates that are solely payments of principal and interest on the principal amount repayable.

Debt instruments at fair value through other comprehensive income:

Debt instruments are measured at fair value through other comprehensive income (with profits or losses being reclassified to the statement of profit or loss upon disposal) only if the following two conditions are met and were not measured at fair value through profit or loss:

The asset is held within a business model whose objective is achieved through the collection of contractual cash flows and the sale of financial assets, and

The contractual terms of the financial assets give rise to cash flows on specified dates that are solely payments of principal and interest on the principal amount repayable.

Debt instruments at fair value through other comprehensive income:

Upon initial recognition of an investment in shares that are not held for trading, the company may choose "irreversibly" to measure subsequent changes in fair value within the items of other comprehensive income "without reclassifying profits or losses to the statement of profit or loss upon disposal." This selection is made on an investment-by-investment basis.

Financial assets at fair value through profit or loss:

All other financial assets are classified as at fair value through profit or loss.

In addition, upon initial recognition, the company may irrevocably designate a financial asset that meets the requirements to be measured at amortized cost or at fair value through other comprehensive income, as at FVTPL, if doing so it will eliminate or significantly reduce an accounting mismatch that might otherwise arise.

Subsequent measurement:

Debt Instruments at Amortized Cost:

After initial measurement, debt instruments are measured at amortized cost using the effective interest rate method, less provision for impairment. Amortized cost is calculated by considering any discount or premium on acquisition and fees or costs that are an integral part of the effective interest rate. Expected credit losses are recognized in the statement of profit or loss when the value of the investments is impaired.

Debt instruments at fair value through other comprehensive income:

Debt instruments at fair value through other comprehensive income are subsequently measured at fair value with gains and losses arising from changes in fair value recognized in other comprehensive income. Interest income and foreign exchange gains and losses are recognized in the statement of profit or loss in the same way for financial assets measured at amortized cost.

The method for calculating the expected credit losses for debt instruments at fair value through other comprehensive income. When a company has more than one investment in the same security, it is considered to have been disposed of on a first-in, first-out basis. On derecognition, the cumulative gain or loss previously recognized in other comprehensive income is reclassified from other comprehensive income to the statement of profit or loss.

Financial assets at fair value through profit or loss:

Financial assets at fair value through profit or loss are recognized in the statement of financial position at fair value. Changes in fair value are recognized in the statement of profit or loss. The interest earned on assets that are obligatory to be measured at fair value is also recognized in the statement of profit or loss using the contractual interest rate, as explained in Note (3-25-1-4). Dividend income from equity instruments measured at fair value through profit or loss is recorded in the statement of profit or loss as other operating income when the right to payment is established.

Reclassification of Financial Assets:

The company does not reclassify its financial assets after initial recognition.

Disposal of the financial asset:

Derecognition from the books other than a material modification:

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is derecognized when:

§ The right to receive cash flows from the asset has expired, or

§ The Company has transferred its right to receive cash flows from the asset or assumed an obligation to pay the received cash flows in full without material delay to a third party under a "pass-through" arrangement; In addition to:

a) The company has transferred substantially all the risks and rewards associated with the asset; or

b) The Company has neither transferred nor retained substantially all the risks and rewards associated with the asset but has transferred control of the asset.

The Company considers control to be transferred if, and only if, the transferee has the practical ability to sell the entire asset to an unrelated third party and can exercise that ability unilaterally and without additional restrictions on the transfer.

When the Company has neither transferred nor retained substantially all the risks and rewards and has retained control of the asset, the asset continues to be recognized only to the extent of the Company's continuing involvement, in which case the Company also recognizes an associated liability. The transferred assets and its associated liabilities are measured on a basis that reflects the rights and obligations that the Company has retained. Continuing participation that takes the form of a guarantee over the transferred asset is measured at the lower of the original book value of the asset and the maximum amount the company could be required to pay.

Derecognition from the books because of a material modification of the terms and conditions:

The Company derecognizes the financial asset when the terms and conditions are renegotiated to the extent that the financial asset becomes, to a large extent, a new instrument, with the difference being recognized as a gain or loss because of derecognition of the asset. In the case of amortized cost debt instruments, newly recognized loans are classified as stage 1 for the purposes of measuring ECL.

In assessing whether to derecognize a financial instrument, among other things, the Company considers the following factors:

- Change in the currency of the debt instrument.
- Introducing the equity instrument functionality.
- Change to the other side.
- If the adjustment is such that the instrument no longer meets the criterion of cash flows that are only principal and interest payments on the principal amount repayable.

If the adjustment does not result in substantially different cash flows, the adjustment does not result in derecognition. Based on the change in cash flows discounted at the original effective interest rate, the company records an adjustment gain or loss.

Impairment of Financial Assets:

The Company recognizes an allowance for expected credit losses for all debt instruments not held at fair value through profit or loss. The expected credit losses are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that the company expects to receive, discounted at the appropriate effective interest rate.

To assess the extent of impairment in the value of financial assets, financial assets are classified at the date of the financial statements into three stages:

The first stage: financial assets that have not experienced a significant increase in credit risk since the date of initial recognition, and the expected credit loss is calculated for them for a period of 12 months.

The second stage: the financial assets that have witnessed a significant increase in credit risk since the initial recognition, and the expected credit loss is calculated for them over the life of the asset.

The third stage: the financial assets that have experienced impairment in their value, which requires calculating the expected credit losses for them over the life of the asset based on the difference between the book value of the instrument and the present value of the expected future cash flows.

The Company's investments in debt instruments consist only of treasury bills, government treasury bonds, and bonds rated in the top investment category (Very Good and Good) by international independent credit agencies and, therefore, are considered investments with low credit risk. It is the Company's policy to measure the expected credit losses on these instruments on a 12-month basis. When the credit risk of any bond deteriorates, the company sells the bonds and buys bonds that meet the required investment grade.

The Company considers a financial asset to be impaired (credit impaired) when contractual payments are past due 90 days or more. However, in some cases, the Company may also consider a financial asset to have defaulted on when internal or external information indicates that it is unlikely that the Company will receive the outstanding contractual amounts. A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

Measurement of Expected Credit Loss for Investments in Debt Instruments:

The company calculates ECL based on scenarios for measuring the expected cash shortfall, discounted at the appropriate effective interest rate. The cash shortage is the difference between the cash flows owed to the company in accordance with the contract and the cash flows the business expects to receive.

When estimating ECL, the company considers three scenarios (base case, upside, and downside).

The following are the main mechanisms and elements for measuring ECL:

a) **Probability of default:** It is an estimate of the probability of default within a certain period. Failure is assessed only if the financial asset's balance has not been previously derecognized and is still recognized in the financial statements. The probability-to-failure model consists of a macroeconomic outlook and a segmentation of the portfolio of financial assets.

b) **Loss in the event of failure:** It is an estimate of the loss arising in the event of failure. It is based on the difference between the contractual cash flows due and those the lender expects to receive, including cash flows from the sale of retained security or other credit enhancements.

c) **Balance at risk:** An estimate of the balance at risk of failure at the future date of failure at the borrower's level, considering expected changes in the balance at risk after the end of the financial period, including interest accrued from missed payments.

The company classifies its financial assets subject to ECL calculations into one of the following categories, which are defined as follows:

(a) **Stage one: 12-month expected credit loss**

The financial instrument is classified as low risk upon initial recognition in the first stage and the credit risk is monitored on an ongoing basis by the company's management. The 12-month ECL is calculated as the portion of the long-term ECL that is the expected credit loss from default events on the financial instrument that is possible within 12 months after the reporting date. The Company calculates the 12-month ECL based on an expectation of default occurring in the 12 months after the reporting date. The 12-month forecasted odds of default are applied to the defaulted balance multiplied by the default loss and discounted

at the appropriate effective interest rate. This calculation is made for each of the three scenarios, as described above. Interest income is computed on the total carrying amount of the financial asset (without deducting the provision for expected credit losses).

(B) The second stage: the expected credit loss over the life - with no impairment of credit value

The second stage includes financial assets that have had a significant increase in credit risk since initial recognition, but there is no objective evidence of impairment. Expected credit losses are recognized over the life of those assets, but interest income continues to be calculated on the total carrying amount of the assets. Lifetime ECL is the expected credit loss resulting from all possible defaults over the expected life of the financial instrument, according to mechanisms like those described above, including the use of multiple scenarios, but the PD and PLN values are estimated on the life of the financial asset. Expected losses are discounted at the appropriate effective interest rate.

At the end of each reporting period, the Company assesses whether there has been a significant increase in the credit risk of financial assets since the first recognition. The Company uses both quantitative and qualitative information to determine whether there has been a significant increase in credit risk based on the characteristics of the financial asset. Quantitative information can be a downgrade in the credit rating below the investment grade. Qualitative information is obtained by monitoring current or expected adverse changes in business, financial or economic conditions that are expected to cause a material (negative) change in the debtor's ability to meet its obligations to the company. In general, the Company will consider a default on payment for a period of more than 30 days after the due date as an automatic indicator of a significant increase in credit risk.

If a significant increase in material risk is identified, this results in the transfer of all instruments in the range held with that party from Stage 1 to Stage 2.

(C) Stage Three: Lifetime Expected Credit Loss - Credit Impairment:

The third stage includes financial assets for which there is objective evidence of impairment at the date of the financial statements; For these assets, lifetime expected credit losses are recognized. Interest income is recognized on an amortized cost basis discounted by the expected credit losses from impairment. For debt instruments considered credit-impaired, the Company recognizes lifetime ECLs for such instruments, according to mechanisms like those described above, with the probability of default set at 100%.

The company identifies financial assets for which there is objective evidence of impairment under Egyptian Accounting Standard No. (47) by applying the definition of default used for credit risk management purposes. The company defines default as: any counterparty is unable to meet its obligations (regardless of the amount involved or the number of days due), or when the counterparties have more than 90 days of arrears.

When applying this definition, the following information may serve as evidence that a financial asset is credit-impaired:

- a breach of contract such as failure or late payment.
- it is probable that the borrower will enter bankruptcy or other financial reorganization; or
- The borrower is facing great financial difficulty due to the disappearance of an active market.

Change between stages (first, second, third):

(a) Change from the second stage to the first stage:

The financial asset is not transferred from the second stage to the first stage until after all the quantitative and qualitative elements of the first stage are met and the full arrears of the financial asset and the returns are paid.

(B) Change from the third stage to the second stage:

The financial asset may not be transferred from the third stage to the second stage until all the following conditions are met:

- Completion of all quantitative and qualitative elements of the second stage.
- Paying 20% of the outstanding balances of the financial asset, including the accrued interest set aside/marginalized.
- Regular payment for at least 12 months.

Measuring Expected Credit Loss:

The company has four types of financial assets that are subject to the ECL model:

- 1) Return receipts resulting from sales contracts with customers.
- 2) Interests for delaying the payment of the returned receipts.
- 3) The company's investments in debt instruments are measured according to the amortized cost method.
- 4) The company's investments in debt instruments are measured at fair value through other comprehensive income.

While cash and cash equivalents are also subject to impairment requirements for financial assets in accordance with Egyptian Accounting Standard No. (47) Financial Instruments, the measured impairment losses were not significant.

Equity tools

The Company subsequently measures all investments in equity instruments at fair value. And when the company's management chooses to present fair value gains and losses on investments in equity instruments in the statement of other comprehensive income, it is not subsequently reclassified to the statement of profit or loss after disposing of the investment. Dividends from these investments continue to be recognized in the profit or loss statement as other income when the company's right to receive such distributions is established.

Changes in the fair value of financial assets at fair value through profit or loss are recognized in the other income / (expenses) item in the statement of profit or loss, as the case may be. Impairment losses (and the reversal of impairment losses) on investments in equity instruments that are measured at fair value through other comprehensive income are recognized separately from other changes in fair value.

Impairment

At the date of the financial statements, the Company assesses whether there is credit impairment of financial assets that are measured at amortized cost and securities that are measured at fair value through other comprehensive income. Credit impairment of a financial asset occurs when there is an event or detrimental events to the expected cash flows of the financial asset.

Evidence of credit impairment includes the following observable data:

- Breach of contract by defaulting on repaying the loan on the due date
- Restructuring the loan or advance payment from the company on terms that are not in the company's favor.
- It is probable that the borrower will go bankrupt or any other financial event, or the disappearance of an active market for the asset due to financial difficulties.

Provisions for financial assets at amortized cost are deducted from the total value of the asset.

Financial liabilities:

Financial liabilities are classified as either "at fair value through profit or loss" financial liabilities or other financial liabilities.

Other financial liabilities:

Other financial liabilities include loan balances, if any, accounts payable, balances due to related parties and other credit balances. The first financial liabilities are recognized at fair value (the value received) after deducting the cost of the transaction, provided that they are subsequently measured at amortized cost using the effective interest rate and the distribution of interest expense on related periods on the basis of the effective return.

The effective interest rate method is a method of calculating the amortized cost of financial liabilities and of charging interest expense over the relevant periods.
The effective interest rate is the rate that exactly discounts future cash payments through the estimated life of the financial liability, or a shorter appropriate period.

Derecognition of financial instruments from the books

A financial asset is derecognized when the company transfers substantially all the risks and benefits of ownership of the asset to a party outside the company. If the Company continues to control the transferred financial asset, then it recognizes the interest it retains in the asset and a corresponding liability representing the amounts it may have to pay.

But if the transaction results in the company retaining substantially all the risks and benefits of ownership of the transferred financial asset, then the company continues to recognize the financial asset, provided it also recognizes the amounts received as a loan against the guarantee of that asset.

Financial liabilities are derecognized when they are either settled, canceled or contractually expired.

Effective interest rate method

The effective interest rate method is used to calculate the amortized cost of financial assets that represent debt instruments and to distribute the return over the relevant periods. The effective interest rate is the rate on the basis of which future cash receipts are discounted (which includes all fees, payments or receipts between the parties to the contract, which are considered part of the effective interest rate as well as the transaction cost and any other premiums) over the estimated life of the financial assets or any appropriate shorter period. The return on all debt instruments is recognized on the basis of the effective interest rate, except for those classified as financial assets at fair value through profit or loss, where the return on them is included in the net change in their fair value.

2/12- Revenues from Contracts with Customers Egyptian Accounting Standard No(48).

The Egyptian Accounting Standard No. (48) replaced the Egyptian Accounting Standard No. (8) "Construction Contracts" and the Egyptian Accounting Standard No. (11) "Revenues." The standard was applied in January 1, 2021. The new revenue standard introduces the use of the control model to recognize revenue instead of the benefit and risk model.

The additional costs of obtaining a customer contract are recognized as an asset if the facility expects to recover those costs, as well as the recognition of the costs of fulfilling a contract as an asset when specific conditions are met.

The company recognizes revenue from contracts with customers on the basis of a five-step model as specified in the mentioned standard:

- Step 1:** Define the contract(s) with the customer: A contract is defined as an agreement between two or more parties that establishes enforceable rights and obligations and specifies the criteria that must be met for each contract.
- Step 2:** Identify performance obligations in the contract: A performance obligation is a promise in a contract with a customer to transfer a good or service to the customer.
- Step 3:** Determine the transaction price: The transaction price is the amount of consideration that the company expects to receive in exchange for the transfer of goods or services promised to the customer, excluding amounts collected on behalf of third parties.

Step 4: Allocate the transaction price to the performance obligations in the contract:
For a contract that includes more than one performance obligation, the Company will allocate the transaction price to each performance obligation in an amount that specifies the amount of contract consideration that the Company expects to receive in return for satisfying each performance obligation.

Step 5: Revenue is recognized when (or whenever) the entity satisfies a performance obligation.

Revenue from Gas Connection Projects and Customer Service Gas Supply

Revenue is recognized when the company transfers natural gas to the customer and the Holding Company.

Revenue from Network Management and Supervision

Revenue is recognized for managing and supervising the gas network and its accessories, where Gas Misr receives 17.5% as a management and supervision fee for the assets owned by the Holding Company (EGAS) throughout the year.

Revenue from Gas Connections for Factories, Engineering, and External Projects

Revenue is recognized based on the percentage of completion method, where revenues are determined according to the ratio of actual costs incurred to the total estimated costs for each contract.

2/13- Egyptian Accounting Standard (EAS) 49: Leases

Egyptian Accounting Standard (EAS) 49 was issued in April 2019, and its effective date is January 1, 2021. This standard replaces Egyptian Accounting Standard 20, which covers the accounting rules and standards related to finance lease transactions.

Lease Liability

At the commencement date of a lease contract, the company measures the lease liability at the present value of unpaid lease payments at that date. This is done using the implicit interest rate in the lease if it can be readily determined; otherwise, the company uses its incremental borrowing rate. Subsequently, the carrying amount of the lease liability is increased to reflect interest on the lease liability and reduced to reflect lease payments made.

Right-of-Use Asset

At the commencement date, the right-of-use asset is measured at the initial measurement amount of the lease liability, plus Any initial direct costs, Prepaid lease payments made to the lessor, Less any lease incentives received from the lessor (if applicable), Plus any costs that the company expects to incur for dismantling, removing the leased asset, restoring the site where the asset is located, or restoring the asset itself to the required condition as per the lease agreement. After the commencement date, the company measures the right-of-use asset at cost, less accumulated depreciation and accumulated impairment losses, adjusted for any remeasurement of the lease liability.

The right-of-use asset is depreciated from the commencement date until the end of its useful life if the lease transfers ownership of the asset to the company at the end of the lease term or the company is reasonably certain to exercise a purchase option.

Otherwise, the company depreciates the right-of-use asset over the shorter of the asset's useful life or the lease term.

The company has applied Egyptian Accounting Standard (EAS) 49 retrospectively as of December 31, 2024, for lease contracts that were active before the standards adoption. The impact of applying the new accounting standard is detailed in Note (6).

2/14- Investment revenues

2/14/1 Revenue measurement

The company uses the most recent financial statements available for the associate companies in applying the equity method.

2/15- Working in progress.

Projects work in progress are charged at all costs to the operations until they are fully prepared and delivered to the customer, and when the revenue is recorded, its related costs is added to the item of activity costs in the income statement, in accordance with Egyptian Accounting Standard No. (48) Revenue from Contracts with Customers

2/16- Capital commitments to purchase fixed assets

The company is committed to applying Paragraph No. (3) of Article No. (26) of the company's articles of association in capital commitments to purchase assets with a maximum of 30 million Egyptian pounds per year, and anything in excess of that is presented to the company's board of directors.

2/17- Income and deferred taxes

It includes income taxes and deferred taxes on current and deferred tax profits and losses. Income taxes are recognized in the income statement, except for taxes related to items directly recognized in shareholders' equity, in which case they are recognized within shareholders' equity.

The current tax is the expected tax on the taxable profit for the year using the tax rates in force at the date of the financial statements and any settlement of the tax due for previous years.

The balance sheet liability method is used for deferred tax, considering the expected differences between the carrying amounts of assets and liabilities for the purposes of the financial statements and for the amounts used for tax purposes. Deferred tax is measured using the tax rates enacted at the balance sheet date.

A deferred tax asset is recognized if a future taxable profit is expected to be available against the use of the asset. Deferred tax assets are reduced to the extent that it is not expected that the related tax benefit will be realized.

2/18- Cash and cash equivalents

For the purposes of preparing the statement of cash flows, cash and cash equivalents include bank and treasury cash balances and time deposits that mature within three months.

2/19- Debtors and other debit balances

Debtors are recorded at nominal value less any amounts expected not to be collected, and classified under current assets.

2/20- Leasing liabilities

2/20/1- Initial measurement of lease obligations

On the date of the lease contract, the lease obligation is measured by the present value of the unpaid lease payments on that date, and the lease payments are deducted using the implicit interest rate in the lease if that rate can be determined easily, and if it is not possible to determine that rate easily Lessee should be used, The company's additional borrowing rate as a lessee.

2/20/2- Subsequent measurement of lease obligations

After the date of the lease contracts, the following is done:

- A. Increase the carrying amount of the obligation to reflect interest on the lease obligation.

B. Reducing the carrying amount of the liability to reflect rental payments.

C. Remeasurement the carrying amount of the lease obligation to reflect any revaluation or adjustments to the lease obligation or to reflect the fixed lease payments.

The right of use asset and lease obligations are presented in the statement of financial position separately from other assets and liabilities. Lease contracts include the lessee's maintenance and insurance of the leased asset, and the lease does not include any arrangements for the transfer of ownership at the end of the lease period.

For a contract that includes one or more lease or non-lease components, (if any), compensation is allocated in the contract to each lease component on the basis of the proportional independent price of the rental component and the total independent price of the non-rental components. As a practical means, and within the scope permitted by the standard, the company as a tenant can choose, according to the category of the principal subject of the contract, not to separate the non-rental components from the rental components and then account for each rental component and any accompanying non-rental components as a single rental component.

21-7- Creditors and other credit balances

Creditors and other credit balances are stated at cost.

2-22/1-The end-of service gratuity system (60-month and 22-month)

The company contributes to the end-of-service gratuity system (60-month and 22-month) for employees, in accordance with the approved regulations for end-of-service benefits for investment companies. These regulations are issued by the Egyptian General Petroleum Corporation and its complementary amendments, as per Law No. 54 of 1975.

2/22- Periodic statements

The periodic financial statements are prepared with the same financial policies applied when preparing the annual financial statements, with the exception of the accounting policies that were changed after the last annual financial statements were issued, which will be reflected in the following annual financial statements in accordance with Paragraph (28) of Egyptian Accounting Standard No. (30 – Interim Financial Statements).

2/23- Credit interest

Credit returns are recognized on an accrual basis, according to the declared interest rate, and are included in the income statement for the period during which they are due.

2/24- symbiotic contribution

The provisions of Law No. (2) of 2018 issuing the Comprehensive Health Insurance System (Symbiotic contribution) shall be applied as of its effective date on July 12, 2018, on all individual and legal establishments, whatever their nature or the legal system they are subject to.

2/25- Gas Regulatory Authority

The company is subject to Law No. 196 of 2017 regarding the regulation of gas market activities issued on August 1, 2017, and its executive regulations for the law referred to in Prime Minister Decision No. 239 of 2018 dated February 14, 2018.

	<u>1 384 157 046</u>	<u>225 601 629</u>	<u>—</u>	<u>1 609 758 675</u>

* The above reserves are formed based on the decisions of the General Assembly in implementation of the fifth paragraph of Article (196) of the executive regulations of Law (159) for the year 1981, and Article No. (51) of the company's articles of association. The general reserve and the reserve for financing natural gas projects and the capital reserve are formed for the purpose of financing Future expansions in the company's activities

24/1 The legal reserve

According to the Companies Law No. 159 of 1981 and the Articles of Association of the company, an amount equivalent to 5% of the profits is set aside to form the legal reserve, and this set aside stops when the reserve reaches 50% of the company's issued capital. The legal reserve may be used to cover the company's losses and to increase the capital.

24/2 Reserve for financing gas projects

Reserves are consolidated in accordance with Article No. (8) of Law No. 217 of 1980 regarding natural gas, which stipulates "withholding a percentage of the annual distributable profits up to a maximum of 50% as a reserve for financing natural gas projects" and Article No. (51) of the company's articles of association and paragraph Fifth of Article No. (196) of the executive regulations of Law (159) of 1981.

24/3 General reserve

It was formed based on the decisions of the General Assembly in application of the fifth paragraph of Article No. (196) of the executive regulations of Law (159) of 1981 and Article No. (51) of the company's articles of association.

24/4 capital reserve

It was formed based on the decisions of the General Assembly in application of the fifth paragraph of Article No. (196) of the executive regulations of Law (159) of 1981 and Article No. (51) of the company's articles of association, and it is supported by capital profits gains, if any.

41 IMPORTANT EVENTS**41/1 Foreign Currency**

- On Thursday, December 25, 2025 the Monetary Policy Committee of the Central Bank of Egypt decided at its committee to decrease the rates of the innovation return, overnight lending, and the Central Bank's main operation rate by 100 basis points, to reach 20%, 21%, and 20.50%, respectively. The credit and discount rates were also decreased by 100 basis points to reach 20.50%.
- On Thursday, February 12, 2026 the Monetary Policy Committee of the Central Bank of Egypt decided at its committee to decrease the rates of the innovation return, overnight lending, and the Central Bank's main operation rate by 100 basis points, to reach 19%, 20%, and 19.50%, respectively. The credit and discount rates were also decreased by 100 basis points to reach 19.50%.

41/2 Recent Wars and Conflicts in the Arabian Gulf Region

- During the reporting period, the region experienced rapidly evolving geopolitical developments and a significant escalation in military tensions, particularly in light of the recent wars and conflicts affecting the Arabian Gulf region and certain parts of the Middle East. Such developments have

contributed to heightened uncertainty regarding the potential economic repercussions at both the regional and global levels.

- Given the evolving and highly dynamic nature of these events, it is currently not possible to reliably predict the extent or magnitude of their potential impact on the overall economic environment or on the Company's operations and activities in general.
- Management continues to closely monitor these developments. However, as of the date of preparation and authorization of these financial statements, sufficient information is not available to enable management to perform a reliable assessment of the potential financial implications of these events on the Company's results of operations, cash flows, or financial position. Accordingly, these events have been considered "significant non-adjusting events" and, therefore, no adjustments have been made to the accompanying financial statements as a result of these developments. Management will continue to monitor the situation and evaluate any future developments and their potential impact on future financial statements.

42 Subsequent Events:

- The Monetary Policy Committee of the Central Bank decided at its meeting on Thursday, April 2, 2026, to maintain the interest rate at its current levels, in light of rising inflationary pressures and geopolitical tensions.
